

# SMARTSKIN

## What is it?

It's the smart and sustainable envelope of your building, consisting of unique windows with sun blinds inbetween them. SmartWindows can generate clean energy from the sun and have a sensory system which regulates your indoor climate. With integrated sun blinds, your building is provided with a dynamic facade, increasing your comfort levels. Next to that, you can charge your phone directly on your window, using 100% sustainable energy.

## What's in it for me?

- + Reduced energy consumption
- + Increased indoor comfort
- + Local climate insights

## How does it work?

1 Sun shining on the PowerWindow turns into green electricity.

2 Sun blinds react to weather conditions and optimize climate.

3 Keep an overview and control sun blinds on your EESYapp.

## EESYapp: have you ever had an app for your window?

Welcome to your EESYapp! With one click you can access the world of your SmartWindow and see the impact you are having on our future. The EESYapp allows you to control your sun blinds from your phone, keep an overview of your energy consumption and it shows you how much electricity you are giving back to the building.
